PROFESSIONAL SUMMARY

Detail-oriented Cloud & DevOps Enthusiast with strong knowledge of AWS cloud services, Linux administration, and version control using Git/GitLab. Skilled in implementing CI/CD pipelines with Jenkins to streamline deployment processes. Passionate about automating workflows, optimizing infrastructure, and ensuring efficient software delivery.

SKILLS SUMMARY

- **Cloud Platforms:** Amazon Web Services (AWS) – EC2, S3, IAM, VPC, RDS, CloudWatch
 - **Version Control:** Git, GitLab – Branching, Merging, Pull Requests
 - **CI/CD Tools:** Jenkins – Pipeline creation, automation, deployment
 - **Operating Systems:** Linux – Shell scripting, package management, system administration
 - **DevOps Practices:** Continuous Integration, Continuous Deployment, Infrastructure as Code concepts
 - **Other Tools & Technologies:** Basic Networking, Monitoring, Troubleshooting
-

PROJECTS

AWS Auto Scaling & Load Balancer Project

- Developed and deployed a scalable AWS architecture using EC2 Launch Templates, Auto Scaling Groups, Target Groups, and Application Load Balancer (ALB).
- Implemented path-based routing for multiple web pages and set up dynamic & scheduled scaling policies for high availability.
- Automated instance provisioning using user data scripts to ensure consistent and efficient deployments.

LEMP Stack Registration Form project:

- Created a dynamic PHP-based registration form on AWS EC2 using the LEMP stack (Linux, Nginx, MariaDB, PHP).
- Systematized environment setup with shell scripting to install and arranged web server, database, and PHP modules.
- Planned a front-end form (HTML) and backend (PHP) to store user data securely in a MySQL database hosted on MariaDB.

AWS Three-Tier Java Application Deployment

- Designed and deployed a scalable three-tier architecture for a Java-based web application on AWS.
- Hosted the front-end using Apache HTTP Server on EC2 instances, integrated with an Application Load Balancer for traffic distribution.
- Deployed Java application (WAR file) on Tomcat running on EC2 within a private subnet for enhanced security.
- Organized Amazon RDS (MySQL/PostgreSQL) with Multi-AZ for high availability and computerized backups.
- Secured the architecture with VPC segregation, Security Groups, and IAM roles.

GitLab to GitHub Repository Mirroring

- Configured secure push-based mirroring from GitLab to GitHub using personal access tokens.
- Implemented a central GitLab workflow with automatic updates to GitHub for backup and visibility.
- Managed version control with Git, including branching, commits, and HTML file deployments.

Node.js CI/CD Pipeline with Jenkins Freestyle Projects

- Developed and deployed a Node.js application using Jenkins Freestyle jobs to mechanized code pull from GitHub, dependency installation, and application deployment with PM2.
 - Configured three-stage pipeline (pull → install → deploy) running under the Jenkins user on Ubuntu. Enabled continuous availability by managing application processes with PM2 and exposing the app via configured firewall and AWS security groups.
-

EDUCATION QUALIFICATION

Master of Science (M.Sc.) in Computer Science — Dr. Babasaheb Ambedkar Marathwada University, Aurangabad —
Percentage: 8.98 CGPA

Bachelor of Science (B.Sc.) in Computer Science — Dr. Babasaheb Ambedkar Marathwada University, Aurangabad —
Percentage: 77.08%
